1. TERMS

Tick Factors

Tick Factor (t) is the price increment representing 1 unit of the relevant Finalto Trading market; by which changes in account profit or loss and margin is calculated.

Minimum / Maximum Trade Size

Trade sizes vary according to market conditions, liquidity, and whether the underlying market is quoted by Finalto Trading as "out of hours", i.e. outside of regular trading hours. The indicative minimum and maximum trading sizes for each asset are included in this document; also the lot size of the corresponding underlying market is provided for your information.

Spreads

Finalto Trading will make every effort to achieve the target spreads as indicated in the market information sheets. However, the spreads may vary according to the underlying market liquidity.

Volume Weighted Average Price

Target Spread/Spread is tradable up to a maximum set trade size. Trades larger than the maximum trade size indicated in the min/max column of the applicable CFD products in this MIS or the first column of the tiered liquidity document for Spot Forex will be executed in accordance to a Volume Weighted Average Price (VWAP).

For more information, please click [here](#)

N.B

The minimum order size is the smallest increment accepted and applicable to all order types. Mini contracts may be available upon request.

Month Symbols

Finalto Trading uses the standardized month codes for our futures contracts, the contract's symbol is made up of the abbreviation of the market followed by the delivery month code and then last digit of the delivery year

Format = Market Abbreviation + Month Code + Year Final Digit

Example

FRANCE 40 MARCH 2018 = F40H8

Code	Month
F	January
G	February
H	March
J	April
K	May
M	June
N	July
Q	August
U	September
V	October
X	November
Z	December

2. FINANCING AND COMMISSIONS

Financing – How it works

If a client holds a Cash CFD or Spot Forex position overnight (i.e. at 5pm EST), including weekends and public holidays, a Financing charge will normally be debited or credited to cover the cost of funding.

For CFDs

For long (buy) trading positions, the client normally pays Financing and as such the trading account will be debited.

For short (sell) trading positions, the client normally earns Financing and as such the trading account will be credited.

The trading account will normally be debited and not credited with the Financing charge when 1 month Alternative Reference Rates (ARR) + 1 month spread adjustment component is less than the relevant Interest Markup.

Financing will not be debited/credited on a position that is opened and closed on the same trading day.

CCY	ARR	Bloomberg Ticker	One-month spread adjustment Bloomberg Ticker	Adjusted ARR
GBP	SONIA	XSONIA1M	YBP0001M	SONIA + 1 Month Spread Adjustment
USD	SOFR	XSOFR1M	YUS0001M	SOFR + 1 Month Spread Adjustment
EUR	ESTR	XESTR1M	YEE0001M	ESTR + 1 Month Spread Adjustment
JPY	TONA	XTONA1M	YJY0001M	TONA + 1 Month Spread Adjustment

For Spot Forex

If a client holds the currency with the higher interest rate, the account will normally be credited the Financing.
If a client holds the currency with the lower interest rate, the account will normally be debited the Financing.

Note:

Finalto Trading's rollover rates are calculated by referencing the relevant 1 month LIBOR for all CFD products.
Number of days is 365 for AUD and GBP; 360 for all others currencies.

The interest markup rates stated above are indicative only.

FINANCING CHARGE CALCULATION - INDEX CFD

Long Position Financing Cost = Notional Value of Instrument x (Underlying Interest Rate + Interest Markup) / Number of Days

Example: Long 250 CFDs of UK100 at a price of 5875.00, GBP based account and GBP LIBOR = 0.50%

Financing Cost = ((250 x 5875.00) x (0.50% + 3.0%)) / 365 = GBP 140.84

Short Position Financing Cost = Notional Value of Instrument x (Underlying Interest Rate - Interest Markup) / Number of Days

Example: Short 100 CFDs of DE30 at 9140.00, EUR based account EUR LIBOR = - 0.25%

Financing Cost = ((100 x 9140.00) x (-0.25% - 3.0%)) / 360 = EUR 82.51

FINANCING CHARGE CALCULATION - SPOT FOREX

Swap rates are calculated by using 1 day interest rate differentials for the two currencies concerned in the position

FX Long Position Financing Cost = Quantity x Swap Rate x (-1)

Example: Long 500,000 USD/JPY at 17:00 ET, GBP based account.

Financing Cost = 500,000 x (-0.0008) [Swap Rate] x (-1) = JPY 400

To convert back to account currency

GBP/JPY = 157.10

Financing Cost in Account Currency = 400/157.10 = GBP 2.54

FX Short Position Financing Cost = Quantity x Swap Rate

Example: Short 200,000 EUR/USD at 17:00 ET, USD based account.

Financing Cost = 200,000 x 0.000019 [Swap Rate] = USD 3.80

FINANCING CHARGE CALCULATION - SPOT OIL

Rollovers for Spot Oil are calculated based on business days, therefore, no additional charges for carrying positions over a weekend or holiday will be applied.

(EOD mid-price of far month – EOD mid-price of near month) / number of days + markup

Example: number of days = 20 Relevant price of near month = 45.42 Relevant price of far month = 45.68

Financing Cost = (45.68 - 45.42)/20 + 0.01 = 0.023

Commissions - How it works

For US Equity CFDs, clients will be charged a commission based on the number of shares traded.

Commission = Number of CFDs x commission

Example: Long 500 CFD shares of AAPL Commission Rate = 3 cents per share

Commission = 500 x 0.03 = \$15

For all other Equities, clients will be charged a commission based on the notional value of the trade.

Commission = Number of CFDs x share price x commission

Example: Long 50,000 CFDs of TSCO.L at 150p per share Commission Rate = 10 bps

Commission = 50,000 x (150/100) x 0.001 = £75

N.B.

Commissions are charged on both the opening and closing side of the trade.

A minimum commission is applicable on all Equity CFDs; which can be found under the "Equity" page in this document.

3. DIVIDENDS AND FAIR VALUE

How it works

To be eligible to receive the dividends, clients must hold a CFD position in respect of the relevant equity or index on the ex-dividend date. The CFD can then be sold at any point after the market opens on the ex-dividend date and still receive the dividend payment.

The equity and index markets may be subject to a dividend adjustment as to reflect that the underlying asset will open at a lower level post-dividend date.

Ex-dividend will be credited or debited on positions held at 5pm EST.

A dividend adjustment is credited to long or buy CFD positions.

A dividend adjustment is debited to short or sell CFD positions.

N.B:

Finalto Trading will process dividend adjustment 1 day prior to ex-dividend date.

Long positions receive net of tax dividends while short positions pay gross dividend.

Dividend adjustments for non - UK equities vary on local tax arrangements, please contact our trading desk for more information.

Formula: $d = p \times n$

d = dividend

p = position

n = dividend declared

EQUITY CFD DIVIDEND CALCULATION

Example: Long 10,000 shares of Vodafone (VOD.L) with net dividend declared at 2p.

$d = 10,000 \times 0.02 = £200$ (credited)

Example: Short 5,000 shares of Barclays (BARC.L) with a net dividend declared at 5p.

$d = 5,000 \times 0.05 = £250$ (debited)

INDEX CFD DIVIDEND CALCULATION

Dividend adjustments to cash index CFD trades apply as follows:

Buy or Long trades are credited with the number of points by which the index concerned has been adjusted x trade size.

Sell or Short trades are debited with number of points by which the index concerned has been adjusted x trade size.

N.B: The DAX 30 index is not subject to adjustments; it is a total returns index and as such all ex-dividends are automatically reflected in the price.

Formula: $d = p \times n$

d = dividend

p = position

n = number of index points (dividend amount)

Example: Long \$10 of US30 with a dividend at 8 index points.

$d = 10 \times 8 = \$80$ (credited)

Example: Short £10 of UK100 with a dividend at 5 index points

$d = 10 \times 5 = £50$ (debited)

FAIR VALUE

For some cash markets, fair value adjustment may be applied where the underlying futures price will be adjusted for financing, dividends, storage and other adjustments to calculate the fair value price of the underlying cash index or commodity instrument.

4. SPOT FOREX

Symbol	Spread as low as	Margin	Trading Hours (ET)	Tick Factor	Example Price
